

Fork Positioner for Forklifts

Fork Positioner for Forklift - A fork positioner is actually a device made out of high quality materials designed to be able to endure the most demanding operations and work environments. This particular piece of equipment could enable the one driving to be able to control the forks hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms in order to facilitate more accurate carrying and position in a faster and more efficient method.

The fork pocket is somewhat unique and enables the one operating it to safely swing the blades into position without any worry of destroying the positioning cylinders. This can allow the operator the option to perform independent or simultaneous fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into fork positioners on available units.
