In the beginning the domestic lift truck marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled forklifts as part of a domestic equipment expansion venture. Product sales of these products were initially targeted to state-run corporations, large scale organizations, and the military. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical instruction grew to become the new focus for enhancing quality and product development.

Domestic forklift business for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's progressive technological enhancements combined with sales success placed them in a situation of significant expansion of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative enterprise project to respond to competitive pressures in the US materials handling industry. This plan drastically expanded Daewoo's forklift sales. Construction was finished in 1984 to facilitate a modern plant which helped set up the company for the fabrication of high added-value goods suitable for export. In 1993, the company had a international sales system and started exporting designs they had developed through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into overseas markets.
